

Assignment 8.3 – Creating Security Telemetry in Our Applications

Instructions

Write a one-page summary of industry best practices for “creating security telemetry in an application.” In your writing, be sure to address two-factor authentication, user credit card changes, user email address resets, user password resets, web server errors, and XSS attacks.

The essay must be substantive, contain at least two (2) secondary sources (scholarly journals, published books, etc.), and written in APA format.

There should be an introduction, a conclusion, and a developed body (generally at least a few paragraphs – at least 500 words). Points will be deducted for not meeting the specified word count requirements. Reference lists and in-text citations do not count toward the word count requirements.
